

BGS Sensor with Digital Display Type

BGS-HL series : 1 output type  
BGS-HDL series : 2 output type

\*FASTUS is a product brand of Optex FA.

# High resolution BGS laser sensor

Minimum detectable height difference = 0.08 mm  
( BGS-HL05/HDL05□□ )

Built-in controller  
4 Digit display

Stable detection  
regardless object color

SUS housing  
for Foods and  
beverage industry

**NEW** BGS-HDL series  
2 output type

Aluminum housing  
for general purpose

# Super precision BGS sensor detects 0.08mm height difference ( BGS-HL05□□ BGS-HDL05□□ )

FASTUS BGS-HL/-HDL Series achieves precise height difference detection regardless of Object color and material. This is accomplished by utilizing original "TRI-CORE" Technology found in our high-end displacement sensors. This Technology enables the highest level of performance in the industry at an economical price.

## ■ Features

### High resolution electronic shutter

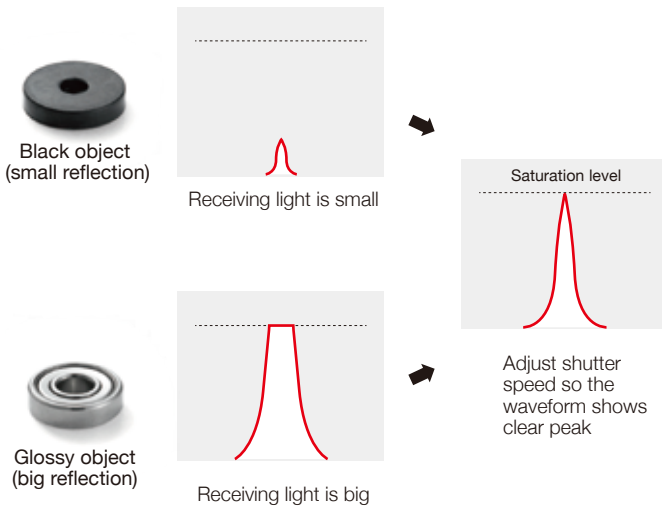

Thanks to an automatic shutter speed adjustment function, the BGS-HL/-HDL series has the advantage of accurately detecting Black non-reflective surfaces as well as shiny reflective surfaces.

The Automatic shutter speed adjustment function minimizes the error caused by differences in reflectivity of object color and material.

### Material response is improved incredibly

The error of BGS-HL25T2/BGS-HDL25T2 is improved to 1/13 (SUS object) and 1/58 (Black paper) compared with conventional BGS laser sensor.

\* White ceramic base at 250mm.

## Digital subpixel processing

Subpixel processing divides one pixel into sub pixels and enables accurate detection of peak.

	BGS-HL05□□ BGS-HDL05□□	BGS-HL25□□ BGS-HDL25□□
Minimum detectable height difference	0.08mm	0.8mm

Condition : Hysteresis setting : 0.02 (BGS-HL05□□/ BGS-HDL05□□), 0.2 (BGS-HL25□□/ BGS-HDL25□□)  
Other condition to be referred notes on the specifications sheet

## Automatic sampling function

In addition to standard feedback, received light to laser power, BGS-HL/-HDL has Automatic Sampling function which enables stable detection of metal surface and also black material by adjusting sampling speed.

### Automatic Sampling

It can get correct shape by changing sampling speed

## Easy to see digital panel

- 4 Digit display in small case
- Easy setup by 4 buttons
- High-end functionality

BGS-HL series

BGS-HDL series

## Ideal for robot mounting

Ideal for mounting on robot cylinder thanks to compact dimensions and the light weight. IP67 water tightness is also secured.

## The minimum detectable height difference of 0.08 mm (BGS-HL05□□/ BGS-HDL05□□)

Perfect for applications that require sensing the height difference of very thin parts, inclination, and overlap (seam) detection.

# Introducing the dual-output BGS-HDL - the newest addition to Optex FA's best-in-class lineup of height difference sensors

The newly added BGS-HDL model is equipped with two control outputs. With support for upper and lower limit output or two-step output, applications that call for two sensors can now be covered with just a single sensor.

## Two selectable distance display patterns

The digital panel for displaying distance on the sensor can be set to either Background mode (bcGd) or Target mode (trGt). Select the display mode that makes seeing changes in distance easiest according to the application.

### Background mode

Displays the distance to the background as zero and displays the displacement amount from zero as a reference.

Used mainly for detection of the object on a conveyor.

### DISPLAY EXAMPLES

Reset the Distance to the background and displays as zero

With the 5 mm tall object

\*Device used: BGS-HDL05T

### Target mode

Displays the distance to where the spot light hits.

Used when there is no background or installed horizontally for the object detection.

### DISPLAY EXAMPLES

With a distance of 100 mm to the object

With a distance of 250 mm to background

\*Device used: BGS-HDL25T2

## Switchable between Output 2 and Teach Input (BGS-HDL function)

For BGS-HDL, it is possible to choose from Output 2 or Teach Input by changing the setting and wiring connection (White wire). With this function, it enables dual input operations such as "Laser OFF" or "Sample & Hold", in addition to Teaching at the same time.

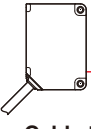

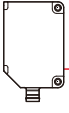

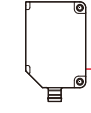

\* The factory setting is Teach Input.

\* The gray-External Input can be assigned to one of the following functions: Laser OFF, Laser ON, Teaching, Sample & Hold, or One shot.

\* The above wiring example is for output set to NPN.

## Application

### 1 output type (BGS-HL series)

Detecting O-rings

Checking face of black rubber parts

Detecting wafers piling

### 2 output type (BGS-HDL series)

Detecting blister pack stacks  
(Output 1: ON with 1 layer; Output 2: ON with 3 layers)

Detecting amount remaining for  
component feeder  
(Output 1: Supply starts when amount remaining  
is small; Output 2: Supply stops when amount  
remaining is large)

Detecting straws and float  
(Output 1: ON with no straw; Output 2: ON  
when floating)

## WARNINGS

This product series is classified as CLASS 1 or CLASS 2 Laser Products by JIS C6802/IEC60825-1 Laser Safety Standard. Every product is with following warning label attached.

- Specifications are subject to change without prior notice.
- Specifications and technical information not mentioned here are written in Instruction Manual. Or visit our website for details.
- All the warnings and cautions to know prior to use are given in Instruction Manual.

### Attention: Not to be Used for Personnel Protection.

Never use these products as sensing devices for personnel protection. Doing so could lead to serious injury or death. These sensors do not include the self-checking redundant circuitry necessary to allow their use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.
